

Better price does not mean better deal.

At the first sight you see two almost the same A-Boards.
Take a look a bit closer and see the difference.

Quality

Opening our 0.95mm wide profile works just great. You don't have to deal with undesirable profile twisting common with 0.75mm.

Solid and top quality 0.4mm metal backwall brings your A-Board long service life. You will see the difference also in stability compared to 0.25mm backwall.

The insufficient thickness of the backwall avoid deformations. With deformed backwall you risk injuries!

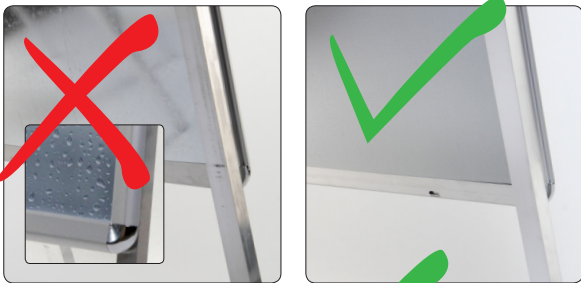

Bended strut due to everyday manipulation? This doesn't happen with our solid 2mm metal strut.

Usability

We produce all our outdoor A-Boards with the draining holes for better water drainage out of the A-Boards.

Stability

High quality materials brings also higher weight. Important is that for outdoor stands it is a benefit ensuring better stability. Moreover thanks to our improved 36° striding angle (in comparison to 28,5°) you will get a perfect and safe solution for your presentation.
